

Recommendation letter:
Michael Sungsoo Fuglø

I have had the pleasure of teaching Michael in my course: Programming during the spring of 2020. The course requires that students are able to specify and create programs, assess the properties of algorithms, data structures, use integrated development tools (IDE), utilize a version control system (git) and apply key methods and technologies to realise models in a database. Furthermore, it requires the students to build an application using the Java framework: Spring Boot in a independent & self driven project-group.

Michael was rewarded with the top-grade (12) by building a best-practice application with the addition of an outstanding report & performance.

Michael has proven to be a capable, self-driven, bright and - most importantly - highly disciplined student. He has also excelled as a noticeable friendly, happy & helpful character.

Therefore it is a great pleasure to recommend Michael to any and all future employer as a student or full-time team member.
